

Abstract of the Disclosure:

In an auction information provision system,
information for desirable goods to be purchased are
previously registered on an auction management server
20 from an user (purchaser) terminal 10B. The auction
5 management server 20 supplies the information for
desirable goods over a network NW. When goods
complying with the information for desirable goods are
registered as information for exhibited goods from an
user (exhibitor) terminal 10C, the auction management
10 server 20 automatically notices the user (purchaser)
terminal that the goods complying with the information
for desirable goods are exhibited in the auction.
